

## **MONOLITH**

Man has known about the heat-retention properties of ceramics for at least 3000 years. Ever since the middle of the 20th century when US soldiers transported the so-called “Mushi-Kamado”, mobile ceramic cooking sites used by Japanese field workers, back to America and developed the first charcoal grills from them, the concept of ceramic grilling has now spread all over the world.

In 2007, Matthias Otto founded MONOLITH Grill - with the ambition of creating the perfect charcoal barbecue. Since then, at the headquarters in Osnabrück, highly skilled engineers and the most creative experts on the barbecue scene have been constantly pushing forward with new ideas to explore all the possibilities of the MONOLITH and to develop it even further.

The MONOLITH models are produced in China, the home country of ceramics. From the firing of the fireclay to the insertion of the sealing ring, every production step is precisely checked and documented here. We remain in constant contact with the factories and together with the local employees, we perfect the production of every individual component to ensure the unique quality of MONOLITH grills.

All this ensures that MONOLITH is more than a simple ceramic barbecue. MONOLITH is a team of BBQ lovers and enthusiasts, it embodies the idea of absolute barbecue freedom, a universal outdoor kitchen with an ever-expanding range of accessories - and above all else the friendship of one barbecuer to another.
